

A SIMPLE BRIEF ON TRADING PROGRAMS AND HOW THEY WORK.

PRIVATE PLACEMENT PROGRAMS / BUY-SELL TRADING PROGRAMS. 50%+ WEEKLY RETURNS....HOW TO UNDERSTAND THE PRIVATE PLACEMENT PROGRAMS-

HOW TO UNDERSTAND THE PRIVATE PLACEMENT PROGRAMS AND UNDERSTANDING WHY THE HIGH PROFITS

In general, these programs (Private investment programs-PPP and Buy - Sell Trading Programs) get a very high profit compared to the common benefit available to traditional investments

Most people do not believe that a yield of 50% to 100% a week is possible. It is more a problem of knowledge of the work programs and lack of experience in trading with financial instruments and especially understanding of how the financial system work and how money is created.

Suppose a leverage of 10:1, which means that the trader is able to make a copy of each sale transaction with 10 times the amount of money the investor has in his bank account.

Let's say the investor has 20 Million Euros, so the Trader is able to work with 200M Euros. Now let's assume that the Trader is able to make a purchase and sale transactions per day for 4 days a week for 40 banking weeks, and that the benefit is 10% for each sale transaction. That makes $10\% \times 4 = 40\%$, and the multiplier effect of the gain will be 10 times higher, that is to say 400% per week.

Then, this return will be divided between the investor and the Trader or Trading Group, but the final net return to investors will remain a double-digit weekly performance!

Also note that the above example can still be considered conservative because, the leverage can be higher, the trader can get a much larger margin for each transaction, and also a higher number of transactions will improve the final performance.

We understand that these returns may seem high, but that is because we are comparing them with traditional investments.

Also remember at no time is the trading company using the client's funds but the credit that they raise on their own, so they are only trading with their own funds at all times.

Also remember they do lose at times, an average of good trades is between 60-80% but they still average a win side of 25-400% increase a day. When you're trading billions to trillions at a time the win sides can be extremely large.

A word about the designation PLATFORM: this is a misnomer as the so called platform is actually a wealthy person or company that has put up say 100-500 billion cash as the credit facility, he is the only one taking a risk as he must make absolutely sure the client (you) have real funds in a bank and that the funds are not from an illegal source or country. He if you are not real will end up paying fines to the HKMA and also replacing any funds made in the profit and the original client's investment no matter how much it is. This is why the "PLATFORM MANAGER" is so cautious with his credit facility.

Most if not all platforms are in Hong Kong as the benefits of no capital gains tax to the banks, platforms and clients is most inviting. Most if not all European and Swiss Platforms are actually performed in HK

The platform are extremely regulated and protected by the Hong Kong Monetary Authority as each and every trade must be registered and given a green light to go forward before contracts can be signed.

All contracts for a 40 week trade must be signed and executed by the prime signatory of the bank account used for the trade. This must be notarized and attested by a law firm.

For the balance sheet/tearsheet trade that person must be in HK to pull the bank statement in front of the bank officer and platform manager then have it registered at the HKMA.

If this is a 3-20 day trade the prime signatory may if he elects to have myself or another person-designated to pull the balance sheets every day, this permission must be given in person to the bank officer and platform manager and I present, this is a very limited POA. I or their designee are not permitted to do any other obligation or sign any documents for the client.

As a note HK has very strict laws and rules and if violated that person and or company can have all their assets and bank accounts locked up and that person put in Jail and or as they seem to do every month executed. If Mr. Burney Madoff had committed his crimes in HK instead of the USA he most likely would have been executed with in a week after trial. The rule here is you know the rules and do not violate them period.

I hope this helps you understand the operations of a platform and how you may profit and also understand how secure they are, if you have any questions please contact us at any time
